

# KE2 Router

Part of the **Refrigeration Network**

## Install and setup KE2 Router

The KE2 Router is a combination switch and router and is pre-programmed to be a "plug n' play" device for use with all KE2 Therm products, simplifying network installation. The KE2

Router has 4 ports available, and can be expanded to work in large commercial environments. It is pre-configured for wireless access. The wireless traffic is **not secure** until you set the security on the wireless access point.
