25' Wire Whip Simplifies Installation of KE2 Evap

The recently introduced wire whip comes with color coded wires, each with connectors that correspond to the controller's inputs. For contractors this can greatly speed installation by eliminating on site preparation of wires and wire labeling. Additionally, it eliminates the need to stock multiple colors and gauges of wires.

Wholesaler Spotlight - Meier Supply helps resistant customer transition to electronic control with the KE2 Evap.

The 84 year old owner of a cider mill in upstate New York had always resisted computers and electronics, but for the KE2 Evaporator Efficiency he made an exception.

"Here is a picture of the completed job at my friends cider mill. He loves the controls! I appreciate all of your help and will make sure I tell everyone about the controls and service you provide. Thanks again"

Ed Brink, Meier Supply

Thanks to Meier Supply, and Ed Brink for making this happen.

Counter display gets the KE2 Temp + Defrost in contractors hands.

Contractors are, generally speaking, hands on people. So, what better way to introduce them to a new product like the KE2 Temp + Defrost, than to put an operational controller at their fingertips.

The KE2 Temp + Defrost display points out key features of the controller, as well as showing navigation and setpoints.

The display is available for wholesalers with a qualifying branch stocking order.
