

## Information and updates from KE2 Therm Solutions

### KE2 Therm Launches KE2 Temp + Defrost Replaces Time Clock and Defrost Thermostat

Designed for the harsh environment of undercounter refrigeration, the KE2 Temp + Defrost saves time on installation by eliminating the need for both a time clock and a defrost thermostat.

The KE2 Temp is easy to use, with straightforward setting of key parameters. It was developed for undercounter refrigeration, commercial refrigerators, wine cabinets, and even walk-in coolers.

Wiring the controller takes no longer than a standard thermostat, requiring only wires to connect power, solenoid and temperature sensor.

The controller's circuit board is conformal coated for protection and a Nema enclosure offers further environmental protection. The KE2 Temp comes complete with temperature sensor and mounting hardware.

General information and installation instructions for the KE2 Temp + Defrost are available on our website.

### Webinars Scheduled

KE2 Therm will present webinars on the KE2 Evaporator Efficiency controller. The topics include navigating the controller menus, basic installation and troubleshooting. The webinars are ideal for introducing counter personnel or contractors to the product.

**Thursday, October 18, 9:00 am CST**

**Thursday, November 1, 9:00 am CST**

**Thursday, November 15, 9:00 am CST**

To register for a webinar, go to our website at [www.ke2therm.com/webinars](http://www.ke2therm.com/webinars).
