

Cooler Weather is the Ideal Time for KE2 Therm NATE Training Courses

Focus on troubleshooting using communication technology, and adaptive refrigeration control

With winter on hand, cooler weather often means a slow down in service calls. Presenting a great opportunity to participate in NATE continuing education training. As the leader in “smart” refrigeration technology, KE2 Therm’s three NATE recognized training courses explore topics, that for the most part, didn’t exist a decade ago - troubleshooting with remote communication, and adaptive refrigeration technology, among them.

“The launch of the KE2 Evaporator Efficiency controller in 2011, really opened up remote communication and adaptive, demand defrost, for use in commercial refrigeration applications – you didn’t have to have a supermarket to make smart technology feasible”, noted Jeff Kavanagh, VP of Marketing at KE2 Therm. “And, while we have YouTube videos, and comprehensive literature, that supports this technology, we knew contractors wanted the opportunity to learn about “the new stuff” and get certification credit at the same time.”

To coordinate training contact your local KE2 Therm Regional Sales Engineer (see list below).

COURSES:

- **Course # 40248-0001 Adaptive Refrigeration Control – Installation and Setup**, Units Earned: 1
- **Course # 40248-0003 Refrigeration System Troubleshooting with Communication Technology** Units Earned: 2
- **Course # 40248-0002 Refrigeration Thermostats** Units Earned: 1
