Contactor Panel with KE2 Evap-RE Goes Big!

Supermarkets like Wal-Mart and H-E-B, as well as commercial, and industrial applications, like the Dallas County Jail and Rogers, AR Hospital are using the KE2 Therm Contactor Panel.

While the KE2 Evap for Rack Efficiency was immediately appreciated for fine tuning the control and efficiency of complicated parallel rack systems, packaging the controller in a contactor panel has propelled the controller to bigger things.

Several companies with large commercial/industrial refrigeration projects, are finding the pre-wired contactor panel appealing, as it simplifies on-site wiring of controller related components, provides consistent setup across multi-store locations (making return service visits more productive), and reduces installation time, and system downtime.

The Contactor Panel with KE2 Evap-RE is becoming the focus of retrofit and new install programs.

The contactor panel is also available with a KE2 Simple Interface Board, allowing simultaneous control of EEVs and EEPRVs.

Additional information on the Contactor Panel with KE2 Evap-RE is available at: <http://ke2therm.com/literature/product-literature-ke2-evap-for-rack-efficiency/> or by scanning the QR Code ■
