

KE2 Compressor Sequencer brings rack control features in line with small to mid-size requirements.

The latest addition to KE2 Therm's refrigeration controls suite, the KE2 Compressor Sequencer is tailored for small to mid-sized rack applications. It eliminates the necessity of using overly complicated controls designed for larger systems.

The KE2 Compressor Sequencer replaces aging rack controllers or can retrofit racks with existing mechanical controls.

The controller supports up to 5 stages of loading through its onboard relays. Each relay can be configured as the rack's: Fixed Speed Compressor, Compressor Unloader, Digital Scroll Compressor, Master Liquid Line Solenoid, or Hot Gas Defrost Relay.

When applied to racks with compressors all of equal horse power, the controller will automatically equalize the runtime of each compressor. Compressors can also be of various HP. When more than one HP is selected the controller will use the stage with the smallest capacity, to maintain consistent suction pressure.

The KE2 Compressor Sequencer includes KE2 Therm's Master View web pages, allowing technicians to quickly and easily assess the system's operation, and review historical performance through onboard data logging.

The compressor sequencer works as a stand-alone rack controller or in conjunction with KE2 Evaporator Efficiency controllers. When applied with the KE2 Evaporator Efficiency controllers the KE2 Compressor Sequencer can limit the amount of defrost load, as dictated by the site's electrical requirements.

For additional information on the KE2 Compressor Sequencer visit www.ke2therm.com ■

Contractor Quote:

"I had a fish stand with 180 defrosts per month. I put in a KE2 (Evap) and it defrosted only 13 times.

The coil was clear as a bell. I saved 167 defrosts in a month, and about \$800 in electricity....

Have any contractor thinking about using KE2 Therm call me, and I would recommend KE2 Therm....

The best support I've ever seen in any company I've ever worked with."

Kliethermes Promoted to Marketing Manager

KE2 Therm recently promoted Ryan Kliethermes to the position of Marketing Manager.

Kliethermes joined KE2 Therm in January of 2010 as a Product Manager, and has been an integral part of KE2 Therm's inception and growth.

A 15-year veteran of the HVACR industry, Kliethermes has experience in product management, marketing, field sales and engineering.

In light of the rapidly changing face of our industry, and the leading edge distributed controls technology that KE2 Therm is developing, Kliethermes' diverse experience, aptitude, and energy are ideally suited for his new role. ■
